## Cal OES Activation Status

State Operations Center	Inland Region EOC	Coastal Region EOC	Southern Region EOC
Level 1	Normal Operations	Normal Operations	Level 2

### State Activation Level Change

The State Operations Center has transitioned to a new activation level sequence.

In accordance with the 2017 edition of the State of California Emergency Plan (SEP) published on 10/01/17, Cal OES has changed our State Activation Level sequence to align with the Federal Emergency Management Agency (FEMA) and many of our local partners.

- Effective 11/30/17, the new Activation Levels were implemented for the State Operation Center and the Inland, Coastal and Southern Regional Operations Centers.
- See below chart for example of activation levels.

Activation Level	Conditions / Definition
Level 1	<ul style="list-style-type: none"> <li>• Catastrophic disaster, which requires comprehensive state-level response and/or assistance</li> </ul>
Level 2	<ul style="list-style-type: none"> <li>• Large-scale disaster, requiring high amount of state involvement</li> </ul>
Level 3	<ul style="list-style-type: none"> <li>• Small to Moderate Disaster/Pre-Planned Event</li> </ul>
Normal Operations/Monitoring	<ul style="list-style-type: none"> <li>• Duty Officer Status</li> <li>• Steady-state operations</li> <li>• Warning Center maintains situational awareness</li> </ul>

# **WEATHER OF CONCERN**

## **Weather of Concern**

- Moderate to strong Santa Ana winds will likely continue to bring very dry conditions with extreme fire danger through Friday for much of Southwest California, with tonight and tomorrow expected to be the most critical times during this period.
- Red Flag Warnings remain in effect until Friday evening for the following counties: Los Angeles, Ventura, Orange, San Diego, Western Riverside, and Southwestern San Bernardino Counties.

## **Active Weather Warnings, Watches and Advisories by County:**

- <https://alerts-v2.weather.gov/counties/CA>

# **WEATHER SYNOPSIS BY REGION**

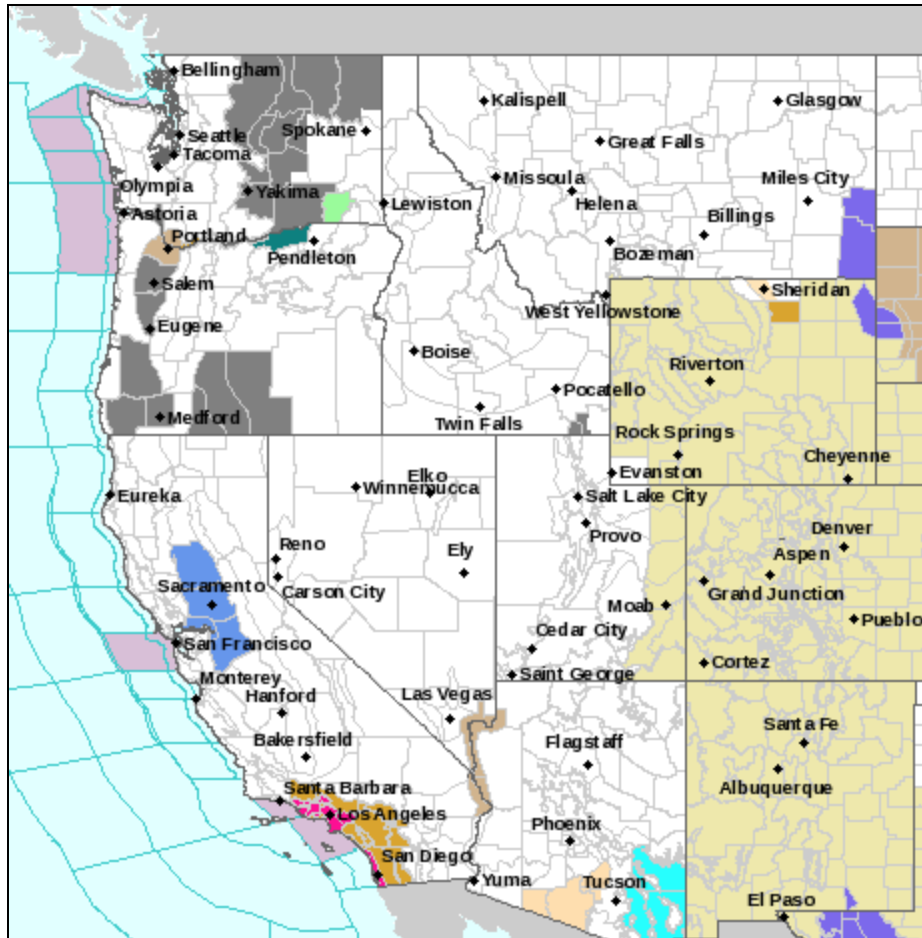

## **NORTHERN CALIFORNIA**

A dominant ridge of high pressure will remain persistent for at least the next 7 to 10 days. All of the weather models show this same weather pattern so confidence is high. Afternoon temperatures will be above to well above normal with overnight lows near to a little above normal. The atmosphere will be dry with unusually low humidity most areas for this time of year. Coastal and some Sacramento Valley bottom areas should see some better relative humidity (RH) recovery by the weekend. Strong stable layers or atmospheric inversions will develop under this pattern and provide some mid slope warming and drying effects. Residual gusty N to NE and even offshore wind flow will occur today and tonight with a similar although lighter flow on Thursday. Peak gusts will generally range between 20 to 30 mph although locally up to 40 mph possible along the east slopes of the Sacramento Valley through this evening. A much lighter and more variable wind flow will start up on Friday and last into the weekend. There is some potential for an enhanced N to NE wind flow early next week but the gustier winds would be a little more localized compared to the past N to NE wind event. No wetting precipitation in sight.

## **SOUTHERN CALIFORNIA**

Strong surface high pressure over the Great Basin will continue to bring offshore winds of 20 to 40 mph with gusts to 60 mph to much of Southern California through Friday morning. The strongest and most widespread winds still look to occur on Thursday. The surface high pressure over the Great Basin will weaken a little starting Friday afternoon, but offshore winds will still be 15 to 30 mph with gusts to 50 mph Friday afternoon through Sunday morning. Local gusty offshore winds will continue over the wind prone areas of Southern California Sunday afternoon through Monday afternoon. Offshore winds may increase once again Monday night through the middle of next week, but at this time the winds do not look as strong as the winds this week. Local offshore winds of 10 to 20 mph with gusts to 35 mph will also continue over the Sierra and deserts through the middle of next week. These winds will also affect the Central Coast tomorrow. Minimum humidity will be mainly in the single digits and there will be very poor nighttime humidity recovery through the middle of next week. Temperatures will warm slowly through Saturday and then be around 10 degrees above normal through the middle of next week. Maximum temperatures will be in the mid 40s to mid 50s across the mountains and mid 60s to mid 70s across the Southern California Valleys today.
